Smooth Move

Snap Dry Waterbase Sanding Sealer

By Sheldon Walker, Southwest Sales and Technical Representative

Are you tired of trying to smooth out your seal coat only to leave swirls and a not so smooth surface. Well, those days are over with the introduction of Infinity Snap Dry waterbase sanding sealer. Snap Dry is a single coat, non-yellowing, “sandable” waterbase sealer. It has great flow and leveling properties, yet dries in a “snap”.

Snap Dry is ready to be sanded in approximately 90 minutes using a maroon pad and #220 sanding strips. Follow up with two coats of your favorite Infinity waterbase topcoat for beautiful results.

It will be a “smooth move” your customers will love.
